

Dynamic demonstration of solar container sandbox

What is Azure Container apps dynamic sessions?

We're excited to announce the public preview of Azure Container Apps dynamic sessions. Azure Container Apps is a serverless platform that enables you to run containerized workloads without managing the underlying infrastructure. Dynamic sessions adds the ability to execute untrusted code in secure, sandboxed environments at scale.

How many objects are available in a 3D Solar System Simulation?

Explore the Solar System to your heart's content. There are approximately 1 million objects available to add to your simulation using the Search bar. This Interactive 3D Simulation is built on data provided by NASA JPL HORIZONS database for solar system objects and International Astronomical Union's Minor Planet Center.

When are extensions removed from a sandbox environment?

Extensions that have been published to a sandbox environment from Visual Studio Code or created using Designer are removed when the environment is updated or relocated within our service. For more information, see [Production and sandbox environments](#) and [FAQ for developing in AL](#).

What changes have been made to the mobile planet camera?

Fixed mobile planet camera having problems with zoom in and zoom out. The mobile planet camera now works properly with zoom in and zoom out. Additionally, fixed half of the simulations not having working buttons.

How does container apps manage the lifecycle?

The Container Apps runtime automatically manages the lifecycle for each session in a pool. A session's life begins as the session starts and continues while the session is in use. After there are no requests to the session after the cool down time has elapsed, the session is destroyed.

Get an overview of your options for setting up demos of Dynamics 365 Business Central online that helps you turn your prospects into customers.
