

What is electrochemical energy storage materials?

The group tries to create a fundamental understanding of the electrochemical reactions and mechanisms. The research group "Electrochemical Energy Storage Materials" focuses on the development and research of alternative electrode materials and electrolyte systems for lithium-based batteries and related energy storage technologies.

What is responsible energy conversion & storage?

Responsible (or sustainable) energy conversion and storage is one of the key issues for large-scale utilization of intermittent renewable energy sources. We want to foster and contribute this energy transition by developing those critical technologies:

What are hybrid battery-hydrogen energy storage systems?

Hybrid battery-hydrogen energy storage systems have shown promising techno-economic outcomes in academic buildings and industrial applications. These configurations manage intermittency effectively while also providing environmental benefits, such as reduced carbon emissions.

Who funds a lithium battery research group?

This research group is partially funded by the Deutsche Forschungsgesellschaft (DFG) through the Cluster of Excellence POLiS. The vast majority of commercial lithium batteries is based on the use of insertion-type or intercalation-type electrode materials.

3 electrolysis are of significant immediate interest. These so-called "solar hydrogen" technologies are able to capture solar energy and efficiently store it as hydrogen for widespread use when demand is ...

We characterise the electrocatalysts developed using electrochemical methods like cyclic voltammetry, electrochemical impedance spectroscopy (EIS) and steady ...

Design and Cost Analysis for a Second-life Battery-integrated Photovoltaic Solar Container for Rural Electric Vehicle Charging

I only want to suggest that buried-junction or encapsulated PV-biased electrodes should be referred to appropriately. If a device functions as a buried junction solar cell driving ...

Solar-powered electrochemical production of hydrogen through water electrolysis is an active and important research endeavor. However, technologies and roadmaps for implementation of this ...

In this chapter, the authors outline the basic concepts and theories associated with electrochemical energy

storage, describe applications and devices used for electrochemical energy ...

Current research in our group is motivated by two main, interrelated technologies: electrochemical energy storage (flow batteries) and carbon dioxide capture. In ...

Direct Anchoring of Molybdenum Sulfide Molecular Catalysts on Antimony Selenide Photocathodes for Solar Hydrogen Production ACS Energy Lett. 2024, 9, ...

Why Redox Flow Battery? Redox flow batteries (RFBs) offer an opportunity to make renewable energy storage more affordable and could accelerate prospects for ...

The group "Electrochemical Energy Storage Materials" researches a variety of materials and technologies for electrochemical energy storages. The group tries ...

The production of hydrogen via the electrolysis of water using renewable energy sources, such as solar energy, is one of the possible uses for ...

Electrochemical energy conversion systems play already a major role e.g., during launch and on the International Space Station, and it is evident from these applications that future ...

Eutectic-derived synthesis of hierarchically nanoporous copper for electrochemical actuation and solar steam generation Nano Research ( IF 9 ) Pub Date : 2023 ...

Developing advanced electrochemical, energy storage and chemical sensor technologies to support exploration of the Solar System, and transferring technologies to industry for applications here on Earth.

Photoelectrochemical (PEC) systems offer a promising approach to harness solar energy for producing essential chemicals and sustainable fuels. This perspective highlights their ...

Ionic liquids (ILs) have attracted considerable attention in energy storage due to their unique properties, including a wide electrochemical stability ...

The battery research group, Storage of Electrochemical Energy (SEE) aims at understanding of fundamental processes in, and the improvement, development and preparation of battery materials.
