

# Factory operation of farasis energy s solar container subsidiary

How will farasis energy's Guangzhou factory work?

The start of production at Farasis Energy's Guangzhou factory fills the final gap in the city's automotive battery segment. Farasis Energy is aiming for the Guangzhou base to deliver products to city customers within four hours post-production, enabling same-day deliveries across South China.

Where is farasis energy based?

On June 29, Farasis Energy kicked off trial production at its new Guangzhou base, nestled in the Sino-Singapore Guangzhou Knowledge City. This facility, boasting an annual production capacity of 30 gigawatt-hours, wrapped up its main construction and began operations in just 10 months--from the first pile driven on September 1, 2023.

How is farasis energy transforming the battery industry?

Farasis Energy is transforming the battery industry with a strong global presence. From Silicon Valley, USA, where pioneering research fuels innovation, to Stuttgart, Germany, driving advancements in European battery technology, we are actively shaping key markets.

Why should you choose farasis energy?

Farasis Energy's solution portfolio offers a wide range of tailor-made and off-the-shelf products as well as numerous services to make your batteries even better. Our products are made in world class manufacturing (WCM) factories with a focus on sustainability and performance.

Who is farasis Energy Europe?

Farasis Energy Europe GmbH was established to drive the transition toward sustainable energy solutions in Europe. The European branch was set up to cater to the growing demand for advanced battery systems in the region, supporting the automotive and industrial sectors in their electrification journey.

Does farasis energy use SPs?

Farasis Energy touts SPs as a versatile solution, compatible with various material systems, including high-nickel ternary, low-nickel, lithium-rich manganese, lithium manganese iron phosphate, and sodium-ion, making it adaptable to different products and scenarios.

Their Bitterfeld-Wolfen plant isn't just a factory; it's a geopolitical tightrope walk. By 2025, this facility alone could capture 8% of Europe's mid-tier EV battery capacity.
