

Where is Finland's first industrial green hydrogen plant?

Sunfire joins P2X Solutions and Finland's President Alexander Stubb in celebrating the launch of Finland's first industrial green hydrogen facility in Harjavalta. A key component of the plant is Sunfire's 20 MW pressurized alkaline electrolyzer.

Why is Finland launching a hydrogen plant?

Alexander Stubb, President of the Republic of Finland, addressed the event. For Finland, the plant represents the opening of the hydrogen economy. Green hydrogen and its derivatives, electric fuels, enable significant emissions reductions for many sectors, such as industrial manufacturing and traffic on land, sea and air.

What is hydrogen cluster Finland?

Hydrogen is the key to a free and industrious Europe. Backed by Finland's unmatched clean energy, technical expertise, and investor-friendly environment, Hydrogen Cluster Finland invites local and global stakeholders to drive sustainable innovation and business.

Will Harjavalta make Finland a green hydrogen economy?

The launch of production at the Harjavalta plant marks a significant milestone for Finland's hydrogen economy. BalticSeaH2 Consortium visiting Harjavalta plant in June 2024. "With the start of commercial operations at the Harjavalta plant, Finland's green hydrogen economy is now moving from plans to reality.

Is Finland ready for a hydrogen future?

Finland is at the forefront of this transition, driving green energy initiatives and expanding hydrogen production. Such is the belief in the possibilities of the local hydrogen sector that Finland has set a bold target of producing one million tonnes of pure hydrogen by 2030 - accounting for 10 per cent of the EU's target of 10 million tonnes.

Can Finland become a global leader in clean hydrogen?

I am extremely proud of our team, which has achieved this milestone together. Finland has excellent potential to become a global leader in clean hydrogen and its derivatives, and we hope many other projects will follow," says Herkko Plit, CEO of P2X Solutions. Green hydrogen enables significant emission reductions by replacing fossil fuels.
