

Why do high-voltage batteries need busbars?

Embossing: Embossing is the process that creates raised and shallow features onto the material. Bending: The metal is bent in one direction and repeated to create a specific shape. High-voltage battery packs, require busbars for several critical reasons: In high-voltage battery systems, large amounts of current must be transmitted efficiently.

Do busbars support high voltage e-mobility?

Busbars support the high voltage requirements of contemporary electric vehicles, not only the battery unit itself but also elsewhere in the system. Custom e-mobility design: Our busbars are developed and produced to meet customer requirements. Learn more here ?

Do busbars provide a safe HV connection?

Busbars provide a safe HV connection on shorter distances. Especially in the area near the pantograph and circuit breaker, space is limited for HV rooflines. That's where TE's busbars provide a solution. Depending on the distance to other HV components, these busbars can feature TE's BBIT for additional insulation.

Why do we need a busbar?

This also determines the manufacturing processes for large volume production runs which already need to be defined at the design stage. Busbars support the high voltage requirements of contemporary electric vehicles, not only the battery unit itself but also elsewhere in the system.

What is high volume busbar production?

High volume busbar production: employing craft precision. One of the signature products developed by Intercable Automotive Solutions are our custom made high-voltage busbars manufactured to client specifications. Busbars are essential components in electric vehicles (EVs), which are increasingly cornering the automotive market worldwide.

Can a busbar be used as a support insulator?

Depending on the distance to other HV components, these busbars can feature TE's BBIT for additional insulation. Insulators can be used as support insulators.
