

Xu et al. [10] proposed a distributed photovoltaic-driven ice storage air conditioning system that utilized ice storage technology. They reported that the ice storage technology can replace ...

Overview Early ice storage, shipment, and production Air conditioning Combustion gas turbine air inlet cooling Ice storage air conditioning is the process of using ice for thermal energy storage. The process can reduce energy used for cooling during times of peak electrical demand. Alternative power sources such as solar can also use the technology to store energy for later use. This is practical because of water's large heat of fusion: one metric ton of water (one cubic metre) can store 334 megajoules (MJ) (317,000 BTU) of energy, equi...
