

Lagging behind in solar container the united states

How will antidumping and countervailing duties affect solar panels?

Antidumping and countervailing duties would increase the price of imported modules by 15 cents per watt, or 66%, to 40 cents per watt, curbing U.S. solar installations, Clean Energy Associates (CEA) said in a new report commissioned by the American Council on Renewable Energy (ACORE).

How will supply chain challenges affect solar development?

Manufacturing growth could be hampered by supply chain gaps and skills shortages and solar developers will continue to face long grid connection queues and permitting challenges, which could soften the demand for U.S. products, Quill Robinson, Senior Program Manager at the Centre for Strategic and International Studies, told Reuters Events.

Is there a mismatch between solar modules and solar cells?

Unfortunately there is, and will continue to be, a mismatch in the capacity of solar modules to solar cells made in the U.S. Anza reports that there are currently seven cell producers with just ten expected by the first half of 2027, or an increase of 43%.

The United States, often seen as a global leader in industry and innovation, needs to catch up in recycling. Despite being one of the wealthiest nations in the world, the U.S. has one of the lowest...
