

The review concludes by discussing the current challenges and future directions in this field, aiming to provide theoretical insights for the practical application of magnesium-based hydrogen ...

Aiming to help researchers understand the current research progress of water-based magnesium-air batteries, discover new research directions based on a comparison of different ...

The robust Mg-H bonds present in magnesium hydride (MgH_2) hinder the dissociation of hydrogen molecules on MgH_2 , leading to suboptimal thermo dynamic and kinetic properties. ...

This work was supported by the National Key R& D Program of China (Grant No. 2022YFB3803700), the National Natural Science Foundation of China (Grant No. 52171186), and the ...

In this work, we conceive and forward a new hydrogen utilization route via photovoltaic-solid oxide electrolysis cells coupled with magnesium hydride-based hydrogen storage and transportation (PV ...

It explores the distinct roles played by different morphologies of carbon materials in enhancing the performance of magnesium-based solid-state hydrogen storage materials. In doing so, ...

The mobile hydrogen source can achieve the preparation of hydrogen at any time, effectively avoiding the safety hazards of hydrogen in the storage and transportation process. ...

Along with a brief overview of literature data on energy storage technologies utilising hydrogen and metal hydrides, this article presents results of the related R& D activities carried out by ...

These, along with past and future dedicated research efforts, would play a vital role in enabling the maturity and readiness of rechargeable magnesium battery technologies. Herein, a technical review ...

Reversible solid-state hydrogen storage of magnesium hydride, traditionally driven by external heating, is constrained by massive energy input and low systematic energy density.

Mg-based metal hydrides (MHs) are a series of potential materials to store hydrogen safely with high volumetric/gravimetric hydrogen storage density. Recently, hydrogen storage and ...

There is a tremendous need to have perennial and continuous access to cost-effective electricity generated from the intermittent energy sources (wind, solar, geothermal, hydropower, wave ...
