

Description technical field [0001] The invention relates to a low-temperature heat-driven dual-container negative-pressure evaporation water distillation and separation device, specifically a low-temperature ...

To overcome the shortage of personal protective equipment and airborne infection isolation rooms (AIIRs) in the COVID-19 pandemic, a collaborative team of research engineers and ...

1 x set of Electric Negative pressure suction device. Toy & Hobbies. Liquid container 2500ML 2. High negative pressure and large flow. Overflow protection device. Machine size 36 32 48CM. Air filter. ...

The utility model relates to an open container negative pressure siphon device, aiming at solving the problems caused by the facts that electromechanical equipment such as a water pump and the like ...

This paper presents the design of a negative pressure isolation room with container modularization, which still maintains all features of a negative pressure isolation room but elevates ...

The purpose of this investigation was to develop a device that (1) could generate a portable negative pressure environment, (2) isolate the patient and thus preserve PPE, (3) be constructed of readily ...

The working principle of the negative pressure liquid filling machine is based on negative pressure technology, which achieves high-precision liquid filling by creating a vacuum environment during the ...

1. Product specifications: stainless steel pressure vessel has a capacity of 100L/160L, used for cold water/hot water sanitation systems, and is suitable for almost all household water plants and pressure ...

At first glance, the TLS negative pressure lab container may resemble an ordinary shipping container. But within, its air-tight structure, ventilation logic, and isolation design provide a ...

Electric Negative pressure suction device Phlegm suction apparatus Slimming Liposuction machine 2500ML 2 220V. 1 x set of Electric Negative pressure suction device. Liquid container 2500ML 2. ...

ABSTRACT Introduction: Negative pressure wound therapy (NPWT) has become a mainstay in the armamentarium for wound care. Since the initial commercial vacuum-assisted closure ...

The present invention relates to a container, and is configured to be able to safely collect excreta from patients as well as prevent external spread of pathogens when a patient is isolated and hospitalized ...

Negative pressure solar container device
