

Can SiO₂ encapsulated paraffin be used as a heat storage material?

????

The goal of this work was to study the miscibility, thermal stability, thermomechanical properties, and temperature regulation performance of paraffin wax/bitumen blends for their potential ...

The storage system includes a finned container filled with nanomaterial (a blend of AlO nanoparticles and paraffin (RT30)), while the fluid circulating within the tube consists of a homogeneous mixture of ...

The present work introduces a comparative investigation on the use of paraffin wax enriched with graphite nanoparticles in the basin of a pyramidal solar distiller as a nano-composite ...

The key goal of this research is to investigate the impact of utilization of the integration of a graphite nanoparticle/paraffin wax container to the basin bottom of the PSD as an efficient ...

These investigations analyze the encapsulation of phase change materials (PCMs): paraffin-magnetite composite, paraffin, and polyethylene glycol (PEG) in concretes. The research ...

A container for the nano-paraffin was designed and prepared in a way that allows it to be attached to the back face of the PV panel. This container was built using galvanized iron sheets.

In this study, paraffin/expanded vermiculite-diatomite form stable composite phase change material (paraffin/EV-DI FSCPCM) was prepared by a simple method using EV-DI mineral ...

The successful dispersion of GO into paraffin is essential for realizing the desired improvements in thermal conductivity, latent heat storage, and overall efficiency of solar thermal ...

Abstract Paraffin and paraffin mixtures that are preferred as phase change materials in many thermal energy storage applications are highly flammable. Microencapsulation of paraffin in a polymeric shell ...

Expanded titanium-bearing blast furnace slag (ETS), containing rich connected pores, largely accumulated, due to low hydration activity and particle strength. In this study, the pore system ...

In this study, we conducted a simulation of the cooling process for a silicon layer within a Photovoltaic (PV) system, integrating a paraffin layer. To augment the cooling rate and expedite the ...

Paraffin has been applied in solar storage [5], building insulation [2, 6], industrial waste heat recovery [7, 8], biomedical fields [9, 10], and smart textiles [11, 12]. Nevertheless, its ...
