What is a solarcontainer?

The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. Solar panels lay flat on the ground. This position ensures maximum energy harvest. Panels lay flat on the ground.

How many installers does a solarcontainer need?

At least 3-4 installers and 1 crane operator are needed to put the Solarcontainer into operation within one day.

How many households can one Solarcontainer supply with electricity?

How many households can a solar Container Supply?

Based on an average power consumption of a 4-person household of 4000 kWh per year and a location in Southern Germany, the solar container can supply approx. 32 households with climate-friendly electricity. At a location in Southern Europe it can even be up to 50 households due to the high solar radiation.

Are behind-the-meter PV systems worth it?

The real value of behind-the-meter PV systems and the design of feed-in-tariffs for their excess outputs have been and continues to be the source of heated discussion in the energy market.

What is the difference between behind the meter and front-of-the-meter systems?

**BEHIND-THE-METER VS. FRONT-OF-THE-METER** While behind-the-meter and front-of-the-meter systems are integral parts of the energy mix, they serve different roles and impact energy users differently. Behind-the-meter systems allow customers to take control of their energy generation and use, offering potential cost savings and increased resilience.

Do prosumers need ESS metering?

Under Gross/net metering, for example, the sell rate is set equal to the retail electricity prices, so prosumers have no reason to install ESS and incur installation and maintenance costs, unless utilities impose limits on authorized hours and the amount of energy sold to the grid.
