

Solar container timeout setting

How do I configure a default timeout in OpenShift Container Platform?

After installing OpenShift Container Platform and deploying a router, you can configure the default timeouts for an existing route when you have services in need of a low timeout, as required for Service Level Availability (SLA) purposes, or a high timeout, for cases with a slow back end. Using the `oc annotate` command, add the timeout to the route:

How do I set a request timeout?

If you are configuring a new service, fill out the initial service settings page as desired, then click Container, Networking, Security to expand the service configuration page. In the Request timeout field, enter the timeout value that you want to use in seconds. Use values ranging from 1 to 3600 seconds, or from 1 to 60 minutes.

How do I set request timeout in Google Cloud?

You can set request timeout using the Google Cloud console, the `gcloud` command line, or a YAML file when you create a new service or deploy a new revision. Click Create Service if you are configuring a new service you are deploying to. If you are configuring an existing service, click on the service, then click Edit and Deploy New Revision.

How do I add a timeout to a route?

Using the `oc annotate` command, add the timeout to the route: For example, to set a route named `myroute` to a timeout of two seconds: Supported time units are microseconds (`us`), milliseconds (`ms`), seconds (`s`), minutes (`m`), hours (`h`), or days (`d`).

What are cold-start times in Azure Container apps?

Cold-starts are often most noticeable in scenarios involving large container images, complex application initialization, or ML/AI workloads. This guide helps you mitigate cold-start times in Azure Container Apps. Machine learning and AI-heavy workloads are often associated with large container images.

I'm attempting to containerize the `aws sam cli` and have read that rather than have a `dind` situation which seems tricky, it is better to mount `docker` that running on the host (`osx` in my ...

Hello, I am using a Container App for my project. With growing data & requests, I am hitting the request default timeout of 240 seconds when...
