

Technical specifications for air solar container in underground tunnel

The increase of the quantity of deeply buried extra-long tunnels has increased quickly, leading to geothermal hazards emerging as a significant issue in engineering projects. This research ...

Traditional ventilation methods consume excessive energy but still fail to meet requirements in underground tunnel group construction. Thus, a closed-loop intelligent control system for ventilation ...

Abstract: Solar passive technique is basically based on the principle of taking the maximum advantage of the local climatic conditions for desired surrounding conditions. In the present paper different ...

This analysis provides technical guidance for optimizing solar chimney design in tunnels, enhancing natural ventilation, and reducing energy consumption for mechanical ventilation ...

The main goal of tunnel air conditioning is to provide a safe, breathable, and comfortable working environment underground. This involves controlling several environmental ...

The present study highlights the exergetic performance characteristics of an underground air tunnel for greenhouse cooling with a 47 m horizontal, 56 cm nominal diameter U ...

Traditionally, municipal pipelines are buried under roads and streets and are prone to damage. The repair is often expensive and impacts greatly on traffic and city service. In addition, the ...

The main objective of the present study is to investigate the performance characteristics of an underground air tunnel (UAT) for greenhouse heating with a 47 m horizontal, 56 ...

This paper discusses a study that investigated different underground bulk air heat exchanger ($>100 \text{ m}^3/\text{s}$) design criteria. A literature review found that no single document exists ...

Ventsim is an underground ventilation simulation software package designed to model and simulate ventilation, airflows, pressures, heat, gases, fire and many other types of ventilation data from a ...

The cables produce remarkable heat, and the temperature in underground tunnels housing these cables should be controlled by cooling or ventilation via shafts with air circulation to ...

Quoted from Standard Specification for Tunnelling (Mountainous Tunnels) issued by Japan Society of Civil Engineers Tables 2.3, 2.4 and 2.5 show the allowable densities of dust, poison gas and the ...

Technical specifications for air solar container in underground tunnel

From initial enquiries to technical specifications, Howden supports tunnel ventilation engineers as they strive for excellence on behalf of their clients. Let Howden deliver you industry-leading performance ...

1.1--PURPOSE AND SCOPE The provisions of these Specifications are intended for the design, evaluation, and rehabilitation of highway tunnels. These Specifications are intended for the design of ...

Technical specifications for air solar container in underground tunnel
