What is an Eaton protected electrical system?

With an Eaton protected electrical system, you can optimize your renewable energy power generation capacity, knowing your equipment is safe. We are a single source for the entire AC and DC circuit protection and disconnecting means.

What protective devices can be used in a control circuit?

Other protective devices in addition to miniature circuit breakers is also possible in control circuits. In particular, SITOP selectivity modules and SENTRON circuit breakers for equipment are designed for and, thus, especially well-suited to the selective protection of 24 V load feeders in parallel.

Does Eaton offer circuit protection?

Eaton offers the industry's most complete and reliable circuit protection for PV balance of system, from fuses, fuse holders and circuit breakers to safety switches and surge protection--allowing for comprehensive overcurrent and overvoltage protection anywhere in the PV system.

Are Sentron miniature circuit breakers UL 1077 certified?

SENTRON miniature circuit breakers 5SY4 and SENTRON thermomagnetic circuit breakers for equipment 5SY1 (see page 4 and page 23) have been tested in accordance with UL 1077 and can be used as supplementary protectors in control circuits that are tapped directly downstream of the branch circuit protection protective device.

How to protect a PV system from a DC arc?

Convert it into a voltage signal. Trigger protection and generate an alarm. As mentioned earlier, electrical fire caused by DC arcs is the most common safety accident with the greatest losses in PV systems, which seriously threatens the asset safety of owners. The key solution is to realize active and rapid shutdown in case of DC arcs.
