

Various solar container cost analysis methods

How are PV production costs modeled?

The costs of materials, equipment, facilities, energy, and labor associated with each step in the production process are individually modeled. Input data for this analysis method are collected through primary interviews with PV manufacturers and material and equipment suppliers.

What is a manufacturing cost analysis?

These manufacturing cost analyses focus on specific PV and energy storage technologies--including crystalline silicon, cadmium telluride, copper indium gallium diselenide, perovskite, and III-V solar cells--and energy storage components, including inverters and batteries.

What is the detailed costs analysis model (DCAM)?

Note: Please view the interactive graphic from a desktop computer. The Detailed Costs Analysis Model (DCAM) on Open EI is a cloud-based tool for calculating the costs to manufacture components and install energy systems. DCAM underpins many of NREL's solar manufacturing cost analyses.

What is NREL manufacturing cost analysis?

Roadmaps identifying potential pathways for cost reduction. Many NREL manufacturing cost analyses use a bottom-up modeling approach. The costs of materials, equipment, facilities, energy, and labor associated with each step in the production process are individually modeled.
