

What are the practical patents for wind power generation and solar container equipment

The rain, wind, sea wave and solar energy 4-in-1 power generation device mainly comprises a wind wheel (2), a hydraulic wheel (3), two solar panels (1 and 1A), a wind and water flow plate (4), a ...

Our team has been hard at work creating the ultimate off-grid workspace solution - RPS tested Solar Containers to power our own offices for the last two years! Our 20 and 40 foot shipping containers are ...

The invention relates generally to systems that provide for the conversion of salt water to desalinated water and for the generation of electric power. More specifically, the present invention relates to ...

As a wind power generation device that meets such requirements, a containerized mobile wind power generation apparatus has been proposed which can be moved with a vertical wind turbine housed in ...

This invention relates to a Compressed Air Turbine-Generator, or CAT-G that will enable the ability to manage energy gathered from ecologically friendly sources, such as solar and wind power. ...

The power generation station may include air displacement tubes that have a lower end immersed in water, and which feed into a plenum where check valves direct air unidirectionally to an air turbine ...

This practical information combines offshore wind power with photovoltaic power generation and aquaculture, reducing the total cost of construction, production and operation of photovoltaic power ...

To shed some light on present day technological advancements in this area, this paper uses the Beijing IncoShare Patent Database as well as patent maps to conduct statistical analyses ...

The patent improves renewable generation efficiency, addresses a major limitation of existing hybrid solutions, and further strengthens Beam Global's global intellectual property portfolio.

The system of mathematical models of thermal processes in hybrid power plants based on solar and wind renewable energy sources and methanol fuel cell has been developed to be used for the power ...

The present invention provides a further improvement over the basic concept of a Tesla turbine. The turbine of the present invention is particularly useful as a wind turbine or the like, and provides ...
